

Horizon Array

Next-Gen Roll-Out Solar Array

The Horizon Array is a deployable composite boom system inspired by the ISS iROSA. Its rolling mandrel design saves critical volume while acting as a protective core for the fragile solar blanket during launch.

By eliminating slip rings and enabling multi-functional utility, this system delivers high power density with simplified electrical architecture.

SPECIFICATIONS

Prototype Length	65 cm
Architecture	Rolling Mandrel
Power Transfer	Direct (No Slip Ring)
System Mass	< 250g (Est.)
Stowed Dims	300 x 50 x 50 mm
Deployment	Self-Deployable
Payload	~200g (Blanket)
Output	~80W

KEY FEATURES

Mechanism	Bistable Composite
Actuation	Burn Wire / Resistor
Feedback	Limit Switch
Variants	ROSA / FOSA
